retroviral proteinase-like protein - vaccinia virus (strain WR)

N.Alternate names: F2L protein
C.Species: vaccinia virus
C.Species: vaccinia virus
C.Species: vaccinia virus
C.Species: vaccinia virus
C.Species: J1-Mar-1990 #sequence_revision 31-Mar-1990 #text_change 18-Jun-1999
C.Accession: A32907; H16213; A31310
R.Slabaugh, M.B.; Roseman, N.A.
Proc. Natl. Acad. Sci. U.S.A. 86, 4152-4155, 1989
A.Title: Retroviral protease-like gene in the vaccinia virus genome.
A.Reference number: A32907; MUD:89264577
A.Molecule Type: DNA
A.Residues: 1-144 < SLA>
A.Cocssion: A32907; MUD:9335616; PIDN:AA448238.1; PID:9335617
R.Reseman, N.A.: Slabaugh, M.B.
Virology 178, 410-418, 1990
A.Title: The vaccinia virus HindIII F fragment: nucleotide sequence of the left 6.2 kb.
A.Reference number: A36213; MUD:91020979
A.Rocession: H36213

Biochem. Biophys. Res. Commun. 279, 534-542, 2000

A) Title: Altered subunit communication in subfamilies of trimeric dUTPases. A) A) Ascession: JC7565

A) Reference number: JC7565, MUID: 20568712

A) Recession: JC7565

A) Residues: 1-188 <FIS>
C) Comment: This ensyme is essential in preventing uracil incorporation into I WP precursor for dTTP biosynthesis.
C) Reywords: hydrolase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 13
A44522
234 integral membrane protein - fluke (Schistosoma mansoni)
N; Alternate names: Sm23
C; Species: Sofistosoma mansoni
C; Species: Sofistosoma mansoni
C; Date: 28-Oct-1992 sequence_revision 09-Aug-1996 #text_change 22-Jun-1999
C; Accession: A4352 sequence_revision 09-Aug-1996 #text_change 22-Jun-1999
C; Accession: A4352 sequence_revision 09-Aug-1996 #text_change 22-Jun-1999
C; Accession: A4352 munuogenic M-r 23,000 integral membrane protein of Schistosoma mansoni worm
A; Reference number: A4352; MUD:90217533
A; Residues: 1-218 <AWIA
A; Residues: 1-218 <AWIA
A; Residues: 1-218 <AWIA
A; Residues: 1-218 <AWIA
A; Residues: 1-218 <AWIA
A; Note: observations of molecular weight suggest this protein is at most lightly glycosy
C; Superfamily: CD9 antigen
C; Keywords: glycoprotein; transmembrane predicted <CWIA
F; 1-13/Domain: intracellular #status predicted <CWIA

Sequence 12, Application US/08487031
Patent No. 5977306
GENERAL INFORMATION: Robert B.
APPLICANT: Grieve, Marcia
APPLICANT: Frank, Glenn R.
APPLICANT: Tripp, Cynthia A.
TITLE OF INVENTION: NOVEL PARASITIC HELMINTH P39
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES AND USES THEREOF NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 78;

                                                                                     δλ
                                                                                                                                                                                                                                                                                                                                                               ö
                          This is the uridine-binding motif of human dUTPase. Sequences are provided (see AAW72849-57) of the uridine-binding motifs of the dUTPases and dCTP deaminases of Pyrococcus furiosus (see also AAW72847), Methanococcus jannaschli, Desulfurolobus ambivalens, Escherichia coli, yeast, human and herpesvitus; a consensus (see AAW72848) is also provided. A claimed method of enhancing a coperase reaction comprises performing the reaction in the presence of one or more of the following: a polymerase enhancing factor (PEF), a dUTPase, a protein that turns-over dUTP and a protein having one or more of the sequences provided in AAW72848-57. Rits are provided in AAW72848-57. Rits are provided for replicating sequencing or for site-directed mutagenesis, for nucleic acids, for site-directed mutagenesis, for nucleic acid nucleic acid protein (preferably PCR or RT-PCR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding human dUTPase (given in AAQ83219) was cloned into pUC19 and recombinants used to transform E. coli BW 286. A transformant selected for growth at 39 deg was cultured overnight. Recombinant human dUTPase was purified and shown to be identical in sequence to the natural protomeric peptide (AAR70144).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pure native human deoxyuridine tri:phosphate nucleotido:hydrolase - used to identify inhibitors, potentially useful as antimicrobial and anticancer agents
                                                                                                                                                                                                                                                                                                                                                               ó;

Sequence

```
This polypeptide comprises the nuclear form, designated DUT-N, of muran deoxyuridine triphosphate nucleotidohydrolase (durpase). Its amino acid sequence was deduced from a T-cell cDNA clone (see AAT90987).

AAT90987). A single gene codes for 2 isoforms of human dUTPase, the nuclear form (DUT-N) and a cytoplasmic form (DUT-N, see AAM30281).

Which is targeted to the mitochondria. The isoforms arise by the use of alternative 5' exons which then join in a common sequence. The DUT-N isoform is produced at low or undetectable levels during non-proliferative periods of the cell cycle, and can be used as a marker for cellular proliferation. It is phosphorylated by plydcc2 at a Ser residue within the consensus sequence for cyclin-dependent kinase phosphorylation. Measuring the amount of dUTPase in a cell can be used to determine its proliferative status (or changes in this status), particularly in nutrient-deprived or neoplastic cells anticancer agents (A) on cells, or monitoring the effect of (claimed). Agents that inhibit dUTPase are potential and antifungal agents.

The dUTPase can also be used to raise antibodies for assaying the erzyme and for drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           point in a common sequence. The DUT-M isoform is detectable in the proliferating and non-proliferating cells, but is produced in increased amounts during periods of non-proliferation in certain increased amounts during periods of non-proliferation in certain Humours. Unlike DUT-N, it is not phosphorylated in vivo. Measuring the amount of durpase in a cell can be used to determine its proliferative status (or changes in this status), particularly in nutrient-deprived or neoplastic cells (claimed). This method can be used for determining the effect of anticancer agents (A) on cells, or monitoring the effect of (A) (claimed). Agents that inhibit durpase are potential antineoplastic, antiviral, antibacterial and antifungal agents. The durpase can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This polypeptide comprises the mitochrondrial form, designated DUT-M, of human deoxyuridine triphosphate nucleotidohydrolase (dUTPase). Its amino acid sequence was deduced from a fibroblast cDNA clone (see AAT90989). A single gene codes for 2 isoforms of human dUTPase, the nuclear form (DUT-M, see AAW30280) and the cytoplasmic form (DUT-M) which is targeted to the mitochondria. The isoforms arise by the use of alternative 5' exons which then
                                                                                                                                                                                                                                                                   dUTPase; DUT-M; human; cell proliferation; inhibitor; cytostatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal activity. The invention antinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynuclocide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lung cancer associated gene sequences, referred to as lung cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as lung cancer -
                                                                                                                                                                                                                                                    Gaps
to raise antibodies for assaying the enzyme and for drug screening
                                                                                                                                                                                                                                                    ;

                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                Gene involved in the synthesis of di:amino:pimelic acid in mycobacteria - and methods for inhibiting its expression to treat mycobacterial infection
                                                                                                                                                 A BGC dapB gene (see AAT04154) was isolated that encoded a bifunctional enzyme (AAR79946) capable of catalyzing the dihydrodipicolinate-reductase and diaminopimelate-dehydrogenase reactions involved in diaminopimelic acid (DAP) biosynthesis. Prodn. of mycobacterial DapB will allow the screening of DapB-inhibitory (antimycobacterial) cpds.

Desulfurolobus ambivalens dCTP deaminase uridine-binding motif. Polymerase enhancing factor; PEF; dCTP deaminase; PCR; amplification. AAW72852 standard; Peptide; 14 AA. 97US-0957709. 97US-0822774. 98WO-US05497 (first entry) Desulfurolobus ambivalens Hogrefe H; (STRA-) STRATAGENE. WO9842860-A1 20-MAR-1998; 24-OCT-1997; 21-MAR-1997; 01-MAR-1999 01-0CT-1998 Hansen CJ, AAW72852; AAW72852 

Polymerase enhancing factor proteins, extracts and complexes -improve the polymerisation activity of nucleic acid polymerases, for use in amplification, sequencing and replication

WPI; 1998-542284/46.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                       This is the uridine-binding motif of the dCTP deaminase of Desulfuciobus ambivalens. Sequences are provided (see AAW72849-57) of the uridine-binding motifs of dUTPases and dCTP deaminases of Pyrococcus furiosus (see AAW72847), Methanococcus jannaschii, Desulfuciobus ambivalens, Escherichia coli, yeast, human and herpesvirus; a consensus (see AAW72848) is also provided. A claimed herpesvirus; a consensus (see AAW72848) is also provided. A claimed method of enhancing a nucleic acid polymerase reaction comprises performing the reaction in the presence of one or more of the following: a polymerase enhancing factor (PEF), a dTPPase, a Collowing: a polymerase enhancing factor (PEF), a dTPPase, a ctivity comprises one or more of sequences given in AAW72848-57. C Kits are provided for replicating nucleic acids, for site-directed mutagenesis, for nucleic acid sequencing or for amplification (preferably PCR or RT-PCR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A sequence encoding a thermostable DNA ligase was cloned into the plasmid poban-13. The DNA ligase is ATP dependent and is useful for detecting nucleic acids by hybridising two oligonuclectdes with adjacent sequences of the target nucleic acid, ligating the two oligonuclectides (using the ligase) and detecting the two oligonuclectides (using the ligase) and detecting the ligation product. Analysis of the fragment revealed three other open reading frames (ORF's). This is a polypeptide encoded by ORF3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ligase, thermostable; thermostability; Desulfurolobus ambivalens; archaebacteria; detection; ligation; ATP; adenosine triphosphate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide encoding plant apoptosis inducing factor for engineering male sterility, altering plant architecture, manipulating stress response, and influencing growth of cells and tissues in culture
                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of a monodehydroascorbate reductase like apoptosas inducing factor (AIF) of Arabidopsis thaliana candsberg erecta. The sequence is predicted from the full-length CDNA (see AAF30431) of a clone isolated from a fertilised carpel CDNA library. It shows 51.7% amino acid identify to previously known monodehydroascorbate-reductase-like AIFs of Gryza sativa and Brassica juncea. The invention relates to isolated nucleic acids encoding plant AIFs. These are used in sense or antisense constructs to alter levels of AIFs in plant cells, and hence to alter apoptosis and eventually to control cell tissue culture growth, facilitate studies of programmed cell death in plants, increase the efficiency of gene transfer, help provide more stable transformations, engineer male sterility, alter plant architecture or manipulate stress response.

```
AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; immunosuppressant; antidabetic; hypotensive; dermatolojytic; coagulant; vasotropic; antidabetic; hypotensive; dermatolojytic; coagulant; vasotropic; antithabetic; hypotensive; dermatolojytic]; antithidabetic; hypotensive; dermatolojytic]; antithidabetic; hypotensive; antithidabetic; proteins antiviral; antithing; antithenatic; antithidabetic; hypotensive; dermatolojytic]; antithidabetic; proteins antithidabetic; proteins antithidabetic; proteins and nucleic acids may be used for determining the presence of or predisposition to, or preventing or treating tractions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, graft vs host disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, astania, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance

The present sequence is soybean vestitone reductase, encoded by
the cDNA insert (see AAX25131) of an EST clone, ser pk0016.cg,
solated from a soybean root cDNA ilbrary following a BLASTX
search. The sequence shows similarity to Medicago sativa vestitone
reductase. The invention relates to isolated nucleic acids
ancoding soybean enzymes that catalyse steps in the blosynthesis of
sofiavones, i.e. chalcone isomerase (see AAX05527), isofiavone
calcutase (see AAX05528) and vestitone reductase. The invention also
reductase (see AAX05528) and vestitone reductase or antisense or antisense or substantial portion of the enzymes, in sense or antisense orientation,
where expression of the enzymes, in sense or antisense orientation,
where expression of the chimeric gene results in production of altered
levels of the enzyme in a transformed host cell. The method is
used to alter isoflavone levels in plants and seeds, particularly
of food plants. High accumulation of isoflavones may have flavour
controgenic tumor-suppressing, antihypercholestere and
hypolipidemic activities. Since the specified enzymes are involved
late in isoflavone synthesis, they are unlikely to interfere with
cother parts of the phenylpropanoid pathway (leading to lignin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Soybean; vestitone reductase; root elongation zone; EST;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II) and (II) and AGG81120, from Staphylococcus epidermidis.

(II) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the used to production of vectors containing them which are used to produce hosts cells which express the perpeptides. The polypeptides (II) via final/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their reatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH5509 represent specifically claimed S. epidermidis genomic DNA AH5509 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. AAH55091 to AAH5509 represent invention specification of the present specification, no the present invention specifically claims of the present specification, however the sequence listing of the present specification, however the sequence listing only goes up to SEO ID NO:4465 to 4472, no sequences are present for SEO ID NO:4465 to 4472,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δλ
                                                                                                                                                                                                                                                                                                                    This sequence represents soybean vestitone reductase, encoded by CDNA clone sre.pk0016.08. This CDNA was identified in a soybean root clone store CDNA in the first expressed sequence and clone CDNA in the first expressed sequence can go come CDNA in the first expressed sequence tag (EST) identified for soybean chalcone isomerase. Vestitone reductase can component enzymes of the phenylpropanoid biosynthetic pathway which is responsible for the biosynthesis of isoflavones from phenylalanine in leguminous plants. The isoflavones found in soybeans are thought to provide several health benefits to humans. Soybean isoflavones chave antihaemolytic, antifungal, oestrogenic, tumour suppressing, hypolipidaemic and serum cholesterol-lowering effects. However, certain isoflavones, such as isoflavone, flavone, anthocyanins and flavanois adversely affect the flavour of certain soy food products. The nucleic cacids of the invention (AAA38424-AA8426) may be used to generate transgenic plants in which expression of chalcone isomerase, isoflavone cacids and/or vestitone reductase is altered. The sequences are also same or other plant species, synthesising DNA primers and probes for mapping the genes and for immunological screening of CDNA expression callbraries. The nucleic acid sequences can be used to mainpulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                New polynucleotide encoding chalcone isomerase for altering the levels of plant isoflavone biosynthetic enzyme in a host cell and for producing transgenic plants and antibodies

New polynucleotide encoding plant apoptosis inducing factor for engineering male sterility, altering plant architecture, manipulating stress response, and influencing growth of cells and tissues in culture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of a monodehydroascorbate reductase like apoptosis inducing factor (AIF) of soybean, as predicted from a full-length CDNA (see AAF30442). It shows 52.6% amino acid identity to known monodehydroascorbate-reductase-like AIFs of Oryza sativa and Brassica juncea. The invention relates to isolated nucleic acids encoding plant AIFs. Such nucleic acids, used in plant cells, and hence to alter levels of AIFs in plant cells, and hence to alter apoptosis and eventually to control cell tissue culture growth, facilitate studies of programmed cell death in plants, increase the efficiency of gene transfer, help provide more stable transformations, engineer male sterility, alter plant architecture and manipulate stress response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BAR1 gene product; DNA construct; ss DNA; insulin; proinsulin;

                                                                                                                                                                                                                                                                           The BARI gene product is expressed as a fusion polypeptide/protein in S.cerevisiae, esp. with insulin or proinsulin. The fusion protein pref. also comprises a KEX 2 processing site. The presence of the BARI sequence means that the fusion protein is secreted into the culture medium or periplasmic space, facilitating its purificn.

                                                                                                                                                                                                                                                                                                                                                                                            ò
```

```
Asn468 and/or Asn503 may be replaced by Gln to prevent glycosylation. A hybrid secretory peptide comprising the signal sequence and amino acids 391-526 or 423-526 directs the secretion of heterlogous proteins or polypeptides. e.g. urokinase, insulin, platelet-derived growth factor, epidermal growth factor or transforming growth factor see also AAQ13195-7.
                                                                                                                                                                                                                              DNA constructs for secretion of foreign proteins - using signal sequence and portion of BAR1 C-terminal domain to direct secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 587;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Indels

New isolated plant copper transporter genes, useful for modulating e.g. germination, sex determination, flower or leaf senescence, fruit ripening, pathogen resistance or response to stress
with other copper transporters, including an N-terminal metal binding motifs, a phosphatase domain, a transduction domain, a phosphorylation domain, and an ATP binding domain. The invention relates to the ranl gene and to antegonist responsive mutants controlling copper transport in the plant. It also relates to the manipulation of ranl and its protein product to modulate the ethylene response in plants, thereby permitting the regulation and controlled alteration of plant growth and developmental processes, including germination, cell elongation, flower and leaf senescence, abcsission, fruit ripening, insect, herbicide and pathogen resistance, and response to stress (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mutein ran1-1. The mutein has an amino acid substitution of Ile for Thr497 of the wild-type protein (see AAX58677). RAN1 is a copper transporter and early-acting regulator of the ethylene gas signalling pathway. Thr497 is in the phosphatase domain and is conserved in all copper transporters. The ran1-1 protein accumulates to the same level as RAN1 but has reduced copper transporting activity. The invention relates to the RAN1 gene and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of the Arabidopsis thaliana RANI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated plant copper transporter genes, useful for modulating e.g. germination, sex determination, flower or leaf senescence, fruit ripening, pathogen resistance or response to stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                    The amino acid sequence is that of barrier protease (BP) from S. cerevisiae. BP compsns. may be used in a variety of industrial processes, partic. those calling for the cleavage of leucine-lysine or leucine-arginine bonds under acidic conditions or at high temp. BP may also be used in the prodn. and isolation of proteins made by genetic engineering methods, e.g. to cleave fusion proteins at Leu-Arg bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Arabidopsis thaliana ecotype Columbia (Col-0) as predicted from the exons of RANI cONA (see AAE27895). RANI is a copper transporting P-type ATPase that acts as an early acting regulator in the ethylene gas signalling pathway. Its shares structural features
                                                                                                         Pure barrier protease – useful in industrial processes where leucine-lysine or leucine-arginine cleavage is required at low pH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

```
New isolated plant copper transporter genes, useful for modulating e.g. germination, sex determination, flower or leaf senescence, fruit ripening, pathogen resistance or response to stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of the Arabidopsis thaliana RANI mutein rani-2. The mutein has an amino acid substitution of Glu for Gly173 of the wild-type protein (see AAY5867). RANI is a copper transporter and early-acting regulator of the chiylene gas signalling pathway. The rani-2 protein accumulates to the same level as RANI but has reduced copper transporting activity. The invention relates to the RANI gene and to antegonist responsive mutants controlling copper transport in the plant. It also relates
to antagonist responsive mutants controlling copper transport in probability of RANI and its protein product to madulate the manipulation of RANI and its protein product to modulate the ethylene response in plants, thereby permitting the regulation and controlled alteration of plant growth and developmental processes, including germination, ripening, insect, herbicide and pathogen resistance, and response to stress (claimed).

The present sequence is not shown in the specification but is derived from the Arabidopsis RANI gene sequence given in figure 5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó

```
CC to the manipulation of RAN1 and its protein product to modulate the replace of explainer response in plants, thereby permitting the regulation and controlled alteration of plant growth and developmental processes.

CC controlled alteration, cell elongation, flower and leaf senescence, abosission, fruit ripening, insect, herbicide and pathogen

CC resistance, and response to stress (claimed).
